

## **Boomi World 2026**

### **General Session Descriptions**

#### **Opening Keynote – Steve Lucas, CEO**

Join Boomi Chairman and CEO Steve Lucas for a keynote on how enterprises can prepare for and lead in the agentic era. As the data activation company, Boomi believes the path to enterprise AI begins with an honest question: does your organization have the data quality, context, and real-time access needed to fully power human intelligence? Because building that active data foundation is what accelerates the journey from human intelligence to artificial intelligence, and ultimately to autonomous enterprise systems with scalable operations and governance. Steve will share product announcements alongside real-world customer proof points, showing what this evolution looks like when it comes together across an enterprise. Attendees will leave with a clear picture of where AI is headed and how to build an organization that is ready to lead it. The shift is already happening. Learn how Boomi can help your organization activate its data and accelerate into the agentic era.

#### **Product Keynote – Ed Macosky, CPTO**

Join Boomi Chief Product and Technology Officer, Ed Macosky for a look at how enterprises can build a trusted, governed foundation for AI that is ready to scale. As Boomi Confidential April, 2026 organizations move from experimentation to execution, success requires connected systems, AI-ready data, and unified control — not just models. Macosky will showcase the Boomi Enterprise Platform's evolving vision, uniting integration, automation, API management, data management, and agent management in one place. Attendees will receive a preview of capabilities for agent design, orchestration, secure deployment, and end-to-end governance — helping teams embed AI into real workflows while maintaining visibility and control, and moving from disconnected pilots to AI action at scale.
